

Primary behavioral Segmentation

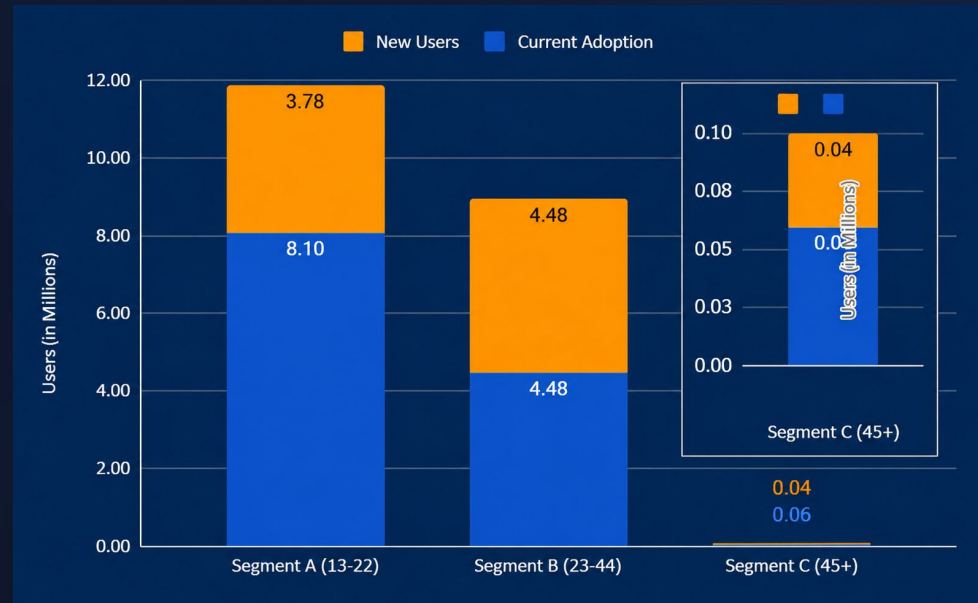

Demographics combined with Income, smartphone ownership & experimentation attributes.

	★ SELECTED USER SEGMENT		
	 13-22	 23-44	 45+
 Income	Low-Mid	Mid-High	Low-High
 Tech Savviness	High	Medium-High	Low-Medium
 Likely Behavior	Heavy ChatGPT usage, prefer typing, know features	Use ChatGPT for work, productivity, convenience	May benefit from voice but lower awareness/confidence

Note on Attributes: Age serves as the primary behavioral segment. Income and Tech savviness are attributes. Income drives device quality/access, while tech savviness shapes overall feature discovery and willingness to experiment.

User Population & Current Adoption (Millions)

Hypothesis and User Insights

Correlating user journey assumptions with verified field research.

Journey & Hypotheses

TOP TECHNICAL GLITCHES

(Among users who faced issues)

6/23 | **Cut off mid-sentence**
Interrupts the flow of conversation

6/23 | **Unsatisfying accuracy**
Responses are often inaccurate or irrelevant

6/23 | **Have to repeat or amend**
Need to repeat or correct transcriptions

User Survey Insights

1 SIGNIFICANT AWARENESS & ADOPTION GAP

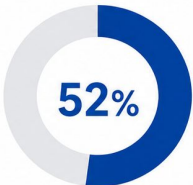

High interest in ChatGPT, but discovery and onboarding gaps limit voice adoption.

LOW FEATURE ADOPTION

20/23
are active
ChatGPT users

Have never
tried mobile
voice input
10 never tried
2 tried once,
never again

11/23 are unaware that voice supports
regional languages
Major discovery problem

2 CORE BEHAVIORAL BARRIERS TO VOICE MIGRATION

12/23 | **Prefer typing / feel it's faster**
It's efficient and habitual

7/23 | **Don't know when or why to use voice**
Lack of clear use cases

6/23 | **Don't trust accuracy**
Concerns about reliability

4/23 | **Privacy concerns**
Don't want others to overhear

Problem Framing Toolkit

What is the true problem?

Users find the voice feature slow, inaccurate and prefer typing

Why? Low understanding, makes people repeat themselves / get inaccurate response

Why? Multiple amendments make the process of getting response slow

Why? Typing corresponds to better articulation of thought and no cut offs mid sentence.

Who are the customers facing the problem?

- Users aged between 23-44
- Tier 1
- Working Professionals
- Tech Savvy
- Use it for Office Work/ Coding

How do we know it is a real Problem? (Qualitative)

"When I pause to breathe, it starts responding even when I have not completed the sentence"

"I believe my thoughts are expressed more clearly by typing without misinterpretation"

"Repeating myself makes me frustrated, I would rather type right the first time than waste time repeating myself."

Issues such as Awkwardness of talking in public is common for All Voice based apps hence avoided

What is the value generated by solving this problem?

FOR THE TARGET CUSTOMERS

- Users would be able to multitask efficiently and work proficiently
- Would be able to do more tasks Hands-free

FOR THE BUSINESS

- **Higher Retention rates:** Users would multitask on daily basis while working
- **More Revenue:** Users might want to increase their daily voice limits by buying new plans
- **New Market:** There is still untapped market in the voice solution space, that can be captured increasing usage and trust over time.

Who Should we solve this problem now?

- Voice adoption is growing at a large rate in India
- Inaccurate responses can lead users to switch to competitors, Leading to higher Churn Rates.
- Users want to multitask efficiently without having to give all their focus on making sure they are interpreted right
